Project Name	Smart Lender – AI-Powered Loan Eligibility Prediction System
Maximum Marks	2 Marks

Data Flow Diagram

The Data Flow Diagram (DFD) illustrates how applicant information flows through the Smart Lender system. It shows the movement of data between external entities, internal processes, data stores, and the ML prediction engine, resulting in an accurate loan eligibility decision.

DFD Symbol Legend :

Symbol	Name	Description
Oval / Rounded shape	External Entity	Represents users or external systems that send or receive information, such as the Loan Applicant or Bank Officer.
Rectangle with number	Process	Represents an operation that transforms input data into meaningful output, such as validation, prediction, or report generation.
Rectangle (filled)	Data Store	Represents a storage location where applicant information or trained ML models are maintained.
Labeled arrow	Data Flow	Indicates the direction of data movement between entities, processes, and data stores.

Smart Lender Data Flow Diagram

The Smart Lender Data Flow Diagram demonstrates the complete workflow of the loan eligibility prediction process. Applicant information is first validated and stored, then processed by the machine learning model to predict loan eligibility. Finally, the prediction result is generated and presented to the user or bank officer for decision-making.
